Data Dictionary – Maddison

Task 1

Group 20

1. Overview

The Maddison csv file provides long-run historical estimates of GDP, GDP per capita and population, expressed in constant 2011 international dollars so that values are comparable across countries and over time.

Item	Value
Source file	`maddison_indicators.csv`
Staging table	`aid_staging.stg_maddison`
Key	(`country_iso3`, `indicator_code`, `year`)
Row count	4 349 rows (4 350 lines in the file, including the header)
Number of entities	15 countries (the EU aggregate is *not* included)
Year span	1900–2022 (123 years)

2. Columns

Column	Type	Description	Example
`country_iso3`	CHAR(3)	ISO 3166-1 alpha-3 country code	`PRT`
`country_name`	VARCHAR(100)	Country name (English)	Portugal
`indicator_code`	VARCHAR(10)	Indicator code: `gdp`, `gdppc` or `pop`	`pop`
`indicator_name`	VARCHAR(100)	Indicator name, including its unit	Population (thousands)
`year`	SMALLINT	Year of the observation	1956
`value`	DECIMAL(22,6)	Value in the indicator's unit	8756.0

3. Indicators and Units

Code	Indicator	Unit
`gdp`	GDP	2011 international dollars
`gdppc`	GDP per capita	2011 international dollars
`pop`	Population	**Thousands** of persons (e.g. Portugal 1900 = 5 404, i.e. 5.4 million)

No indicator has negative values. `gdp` is a derived value: $gdp = gdppc \times pop \times 1000$

4. Temporal and Geographic Coverage

Coverage is described **by country**, because gaps in this source depend on the country rather than on the indicator (the three indicators share the same years, except in Romania).

ISO3	Country	Years	Rows	Missing Years Inside the Span
BEL	Belgium	1900–2022	369	None
DEU	Germany	1900–2022	369	None
ESP	Spain	1900–2022	369	None
FRA	France	1900–2022	369	None
GRC	Greece	1900–2022	369	None
ITA	Italy	1900–2022	369	None
PRT	Portugal	1900–2022	369	None
CZE	Czechia	1970–2022	159	None (series starts in 1970)
EST	Estonia	1973–2022	132	1974–1979 (single value in 1973, then 1980–2022)
LVA	Latvia	1973–2022	132	1974–1979 (single value in 1973, then 1980–2022)
LTU	Lithuania	1973–2022	132	1974–1979 (single value in 1973, then 1980–2022)
IRL	Ireland	1913–2022	309	1914–1920
HUN	Hungary	1900–2022	300	1901–1909, 1911–1912, 1914–1919, 1921–1923, 1943–1945
POL	Poland	1900–2022	267	1901–1909, 1911–1912, 1914–1919, 1921–1928, 1939–1947
ROU	Romania	1900–2022	335	gdp and pop: 1901–1909, 1911–1912, 1914–1919; gdppc: none
EUU	European Union	–	0	Not available in this source

Summary

- Seven Western European countries, including Portugal, have complete annual series for 1900–2022 (3 indicators × 123 years = 369 rows).
- Hungary, Poland and Romania only have benchmark years before 1920, with Hungary and Poland also having no data during 1943–1945 and 1939–1947.
- The Baltic states effectively start in 1980, and Czechia in 1970. Ireland starts in 1913 and has no data for 1914–1920.

5. Particularities and Data Quality

- **EU aggregate missing.** EUU exists in WDI and in the events file, but not here.
- **Romania - misaligned indicators.** In 17 years (1901–1909, 1911–1912, 1914–1919) gdppc is available but gdp and pop are not.
- **Consistent country identifiers.** Each ISO3 code has the same country name here as in WDI and in the events file.
- **Comparability.** Values are in constant 2011 international dollars, so they can be compared across countries and years; they are not comparable with the current US$ values in WDI.
- **Missing data as absent rows.** There are no NULL values (0 of 4 349) and no duplicate keys; missing years simply have no row.
