Data Dictionary – WDI

Task 1

Group 20

1. Overview

The WDI file provides modern economic, social and sectoral indicators from 1960 onwards for 15 countries and the European Union aggregate.

Item	Value
Source file	`wdi_indicators.csv`
Staging table	`aid_staging.stg_wdi`
Key	(`country_iso3`, `indicator_code`, `year`)
Row count	11 371 rows (11 372 lines in the file, including the header)
Number of entities	16 (15 countries and the EU aggregate, `EUU`)
Year span	1960–2025 (66 years)

2. Columns

Column	Type	Description	Example
`country_iso3`	CHAR(3)	ISO 3166-1 alpha-3 country code	`BEL`
`country_name`	VARCHAR(100)	Country name (English)	Belgium
`indicator_code`	VARCHAR(30)	World Bank indicator code	`NY.GDP.MKTP.KD.ZG`
`indicator_name`	VARCHAR(200)	Indicator name, including its unit	GDP growth (annual %)
`year`	SMALLINT	Year of the observation	2006
`value`	DECIMAL(22,6)	Value in the indicator's unit	2.552341

3. Indicators and Units

Code	Indicator	Unit
`NY.GDP.MKTP.KD.ZG`	GDP growth	Annual % (constant prices)
`NE.EXP.GNFS.ZS`	Exports of goods and services	% of GDP
`NE.IMP.GNFS.ZS`	Imports of goods and services	% of GDP
`NY.GNP.PCAP.CD`	GNI per capita, Atlas method	Current US$
`SP.DYN.LE00.IN`	Life expectancy at birth	Years
`SP.URB.TOTL.IN.ZS`	Urban population	% of total population
`NV.AGR.TOTL.ZS`	Agriculture, forestry and fishing, value added	% of GDP
`NV.AGR.TOTL.CD`	Agriculture, forestry and fishing, value added	Current US$
`NV.IND.TOTL.ZS`	Industry (including construction), value added	% of GDP
`NV.IND.TOTL.CD`	Industry (including construction), value added	Current US$
`NV.IND.MANF.ZS`	Manufacturing, value added	% of GDP
`NV.IND.MANF.CD`	Manufacturing, value added	Current US$
`NV.SRV.TOTL.ZS`	Services, value added	% of GDP
`NV.SRV.TOTL.CD`	Services, value added	Current US$
`SL.AGR.EMPL.ZS`	Employment in agriculture (modelled ILO estimate)	% of total employment
`SL.IND.EMPL.ZS`	Employment in industry (modelled ILO estimate)	% of total employment
`SL.SRV.EMPL.ZS`	Employment in services (modelled ILO estimate)	% of total employment

Only GDP growth has negative values. Value added in current US$ and GNI per capita are not adjusted for inflation, so they are not directly comparable over time, nor with the 2011 international dollars used in Maddison.

4. Temporal and Geographic Coverage

Coverage is described **by indicator**, because the starting year depends mainly on the indicator and, secondly, on the country group. All series are continuous from their first year to the last available year (no internal gaps).

Indicator(s)	First Year	Last Year	Rows With Value
Life expectancy	1960	2024	1 040
Urban population	1960	2025	1 056
Exports, imports (% of GDP)	1960	2025	757 each
GDP growth	1961	2025	860
GNI per capita	1962	2025	823
Value added, 4 sectors (% of GDP and US$)	1960	2025	547–551 each
Employment, 3 sectors	1991	2025	560 each

First year with data, by country

ISO3	Trade	GDP Growth	GNI pc	Value Added	Employment	Life Exp.
PRT	1970	1961	1962	1995	1991	1960
ESP	1970	1961	1962	1995	1991	1960
FRA	1960	1961	1962	1960	1991	1960
DEU	1970	1961	1962	1991	1991	1960
BEL	1970	1961	1962	1995	1991	1960
ITA	1970	1961	1962	1990	1991	1960
IRL	1970	1961	1962	1995	1991	1960
GRC	1960	1961	1962	1995	1991	1960
POL	1995	1991	1992	1995	1991	1960
CZE	1990	1991	1992	1993	1991	1960
HUN	1991	1961	1970	1995	1991	1960
ROU	1990	1991	1992	1990 (manufacturing 1991)	1991	1960
EST	1993	1991	1995	1995	1991	1960
LVA	1995	1991	1997	1995	1991	1960
LTU	1995	1991	1997	1995	1991	1960
EUU	1970	1961	1962	1991 (agriculture 1995)	1991	1960

Summary

- Life expectancy and urban population are available for all countries from 1960.
- Western countries have trade from 1970, GDP growth from 1961 and GNI per capita from 1962. In Eastern countries, these series start between 1990 and 1997, except in Hungary (GDP growth from 1961, GNI per capita from 1970).
- Sector value added starts in 1995 for Portugal and most countries. The exceptions are France (1960), Italy (1990), Romania (1990), Germany (1991) and Czechia (1993).
- Sector employment starts in 1991 for all countries.

5. Particularities and Data Quality

- **Missing data as absent rows.** There are no `NULL` values (0 of 11 371) and no duplicate keys; missing years simply have no row.
- **EU aggregate included.** `EUU` is available here and in the events file, but not in Maddison.
- **Manufacturing is part of industry.** The manufacturing share never exceeds the industry share, so the two must never be summed.
- **No employment for manufacturing.** Employment exists only for agriculture, industry and services, so `employment_pct` is empty for manufacturing.
- **Sector value-added shares do not add up to 100%.** Agriculture, industry and services add up to between 84% and 98% of GDP (about 89% on average), because GDP also includes net taxes on products. Employment shares add up to 100%.
- **Exports and imports above 100% of GDP.** This happens in 16 and 6 country-years respectively (maximum 144% and 126%). It is not an error: exports and imports are gross values, while GDP measures value added.
- **Extreme GDP growth.** GDP growth ranges from −32.1% to +42.4%.
- **Ireland.** GDP is distorted by the activity of multinational companies; GNI per capita is the more reliable income indicator.
